

Know every morning that your drain is in order.

The system automatically measures what goes into and out of your substrate, per irrigation cycle. You see it in the app and get an alarm when the drain is not what you want, wherever you are.

For substrate cultivation of

Strawberries

Raspberries

Blueberries

Redcurrants

A daily average does not show when it goes wrong.

We measure per irrigation cycle. You see right away what is happening and can adjust at once, also on hot summer days with many cycles.

Per cycle instead of a daily average

Straight away adjust, wherever you are

Alarm for too little water, too little drain or a late start

CHOOSE YOUR VARIANT

DMS Basic

- Drain %
- Flow in
- Flow out

DMS EC

- Everything in Basic
- EC in and out

DMS PHEC

- Everything in Basic
- pH in and out
- EC in and out

DMS PHEC PRO

- Everything in PHEC
- Volumetric water content (VWC) in the substrate
- EC and temperature in the substrate

“More insight means that at some moments we give less water than we were used to. On top of that, I am always up to date now, wherever I am.”

Head of field operations, Berrybrothers

Want steadier growth, more yield and more peace of mind?

Request a personal quote. We discuss your crop and put together the system that suits you.
