AGRO DATA SYSTEMS

WEATHER AND MEASURING STATIONS

The right station for your crop.

For weather, soil and frost on your own plot. Our stations run on a solar panel and battery, with GSM and GPS on board: no mains power or wifi needed.

STATIONS

Pro
Most popular

Complete insight above and below ground

Weather, soil moisture, leaf wetness and wind

Fruit
Built for disease models

Weather and leaf wetness, for data to RIMpro

Asparagus
Know how warm your bed really is

Temperature at 4 depths in the bed

Basic Weather & Soil
Irrigate on the moisture in the soil

Weather and soil moisture at three depths

Basic Soil & Rain
The compact soil version

Rainfall, air pressure and soil moisture

Basic Weather
The weather on your plot

Temperature, humidity, rainfall and air pressure

FROST ALARM

When night frost threatens, we call you awake.

You miss a notification when you are asleep. So you get a phone call as soon as the wet-bulb temperature on your plot reaches the limit you have set.

Up to 5	numbers called at once
Worldwide	reachable
You	set the limit

Available with the optional wet-bulb sensor.

EXPAND YOUR NETWORK

SoilSense
An extra station for soil moisture, soil temperature and night frost, at a second spot on your farm.

Pump monitoring
Know straight away whether your irrigation pump is running. If it stops during frost protection, you get an alarm and a phone call.

Leaf-to-air
See when it gets too hot for your crop and whether the stomata are closing.

Included with every station

- Alarms by push and email
- App and portal for analysis
- GPS with theft alarm
- 5 years of data storage, Excel download and API
- Link with Agromanager and RIMpro
